

**GALAXY**

## THE NEW GALAXY

Music subtly surrounds your guests. Above the rafters a violet-blue sky glows with ochre- yellow accents. The atmosphere is breathtaking, the colours enchanting. Attendance may be in the thousands and yet each of your guests feels personally welcome.

A dream? No, your guests are in the world's largest temporary structure: the New Galaxy by De Boer – appropriately - described as “unparalleled anywhere in the world”. With this structure De Boer has established a trend for a new generation of magical event structures. Traditional atmosphere and new technology have combined into a unique result. From a distance, the contours of the New Galaxy form a contemporary skyline. A modern interpretation of a truss structure blended with attractive detail enhancements add up to a warm interior ambience.

### SPECIFICATION ON THE NEW GALAXY

The highest point of the New Galaxy is 26 metres from the ground and its base is 60 metres wide by 107 metres long, dimensions that make it as big as a football field. This is enough space to receive up to 10.000 guests in luxury and comfort - and if this size is still too small for your needs, the renowned De Boer Sterrenshow tent, for example, can be linked up to the New Galaxy for extra accommodation.

### SPECTACULAR EVENTS

Talking about stars, the design of the New Galaxy allows for large theatre and TV productions to be held in this awesome structure. Not only are all the necessary facilities available, but the ridge height and the structure of the walls have been specifically designed for this purpose. Another feature is that twelve king poles spaced at 22-metre intervals support the phenomenal roof. This configuration means that the lines of vision from all angles are ideal for the most spectacular events.

Lesser spectacles of course are no problem - the structure has so much atmosphere of itself that any event held in it becomes a special happening. That's why the New galaxy can serve as a magnificent enclosure for company parties, conferences, pop-concerts, shows and other large- scale events.

Within a short time the New Galaxy has proven its capacity to provide top quality accommodation for a wide range of purposes. For example, in Vienna the structure hosted the world famous Spanish Riding School, it was used in Mannheim to create a marvellous covered skating rink and was utilised in Biddinghuizen to accommodate the Lowlands Festival.

## THE NEW GALAXY

### COMFORT

The hospitality made available in the New galaxy is unequalled. Every detail is worked out for you. Visitors can be seated on gigantic stages, grandstands for thousands of people, multi-storey hospitality units or a raised VIP patio for the most pampered guests. For the realisation of events De Boer can arrange collaboration with the best specialists in Europe. In this way organisational concepts can be developed to individual specifications. The event is created for you with the greatest possible care, permeated with the atmosphere you have in mind. The gigantic size of the New Galaxy means virtually limitless possibilities.

### NEW, FAST TECHNOLOGY

In spite of the huge dimensions of the New Galaxy, it can be ready to use in less than a week, complete with furnishings. Such super fast service can only be achieved because De Boer works, as always, with only the most advanced systems, a specialised construction team and highly efficient logistics. As a result, this unique structure can be erected almost anywhere in the world, any time. To keep the structure taut under all weather conditions, some eight kilometres of steel wire are incorporated into its roof. The material and shape of the structure ensure optimum acoustics. Hinged doors and such facilities as heating and air conditioning are optional.

### STURDY AND SAFE

Typical of all De Boer accommodation is the integrity of all the materials and structures used. The structure is TUV approved and has met the most stringent European requirements, including the German DIN and French CTS standards. All materials meet the highest European standards for fire safety. All structures are wind tested. In this way De Boer ensures not only stylish accommodation but carefree hospitality as well.
